

Clinical Data Management

Collaborating globally, our clinical data management team is committed to the accuracy, integrity, and security of your data.

To deliver on our commitments to data excellence and public health, we have consistently invested in our people, technologies, and clinical data management processes while building a culture that enables data management teams to make valuable contributions to our clients' studies. The longevity, skillsets, and customer service ethic of our data management professionals enhances day-to-day service and communication with clients, helping to keep studies on track.

Our Global Experience:

- Trusting and long-lasting relationships with clients, collaborating with both government and private sector partners.
- Established multiple data and coordinating centers, including multi-study programs in Vaccines and Infectious Diseases, Cell and Gene Therapy, Ophthalmology, and Maternal and Child Health. These programs have resulted in hundreds of studies and spanning many years - and in some cases decades.

By the Numbers

- Conducted over **1,000** clinical studies in the Advantage eClinical platform
- Supported studies in over **75** nations
